

AFTER your lawn turf has been laid:

Watering - Saturate your lawn immediately after laying. Keep it moist for 4 weeks – do not let dry out.

Traffic - Use your new lawn sparingly for the first two or three weeks, until roots are well-established. No heavy games, dog traffic or other rough use until then.

Mowing - When new lawn cannot be lifted - 10-14 days after laying in warm weather - mow along turf strips until fully established, then north/south, east/west for best results.

Never remove more than a third of the leaf blade in a single mowing. Set mower heights at: Couch - 20 mm; Soft Leaf Buffalo - 30 mm; Fescue - 50 mm; Riley's Super Sports - 12 mm.

Fertilizing - In growing season, fertilize about 3 weeks after your new lawn/turf has been laid and water it in well. Regular light applications (about 8-12 weeks) will give you a year-round full-coloured, healthy carpet. Late autumn fertilizing helps retain winter colour.

Maintenance - Mow lawn lower before applying springtime nitrogen-based fertilizer. If area is uneven, top-dress with washed B-grade topsoil and mow in the opposite directions to iron out bumps.

Your lawn will smother if too much soil is applied. Brush to expose leaf blades. Keep mower blades sharp; don't let grass grow too high and thatchy.
